SMARTLOC

THE SMARTEST WATER TRAP FOR KITCHEN SINKS

THE SMARTEST WATER TRAP FOR KITCHEN SINKS ON THE MARKET

Smartloc is the ultimate water trap for the kitchen. It is packed with clever technical improvements such as smooth oval pipes to improve flow and prevent residue build-up. Smartloc water traps are easy to install and their space-saving design can be adjusted both vertically and horizontally. And what's more, no special tools are needed if you ever need to clean them. This is what we call smart!

When it comes to style, the water-trap strainer is the part that stands out. That's why we are pleased to customise our strainers according to your wishes. You can also give the kitchen sink an elegant look by adding the PreveX MagneticCover to the strainer, compatible with both steel and composite sinks.

If your kitchen demands high quality and flexibility, then Smartloc is the answer. The seals of this preassembled water trap are manufactured using 2K injection moulding for guaranteed durability and watertightness. In case of a sudden change in plans, a quick coupler transforms a 1-bowl system to a 2-bowl system with a click.
